

Kemal

Festulolium

- Excellent Spring Growth
- High Hay Yields
- Good resistance to rusts & mildews
- Excellent Quality and Palatability
- Drought Tolerant
- Adapted to cutting
- Adapted to grazing
- Traffic Resistant

Seeding Rate:

30-40 lbs. per acre/alone
6-12 lbs per acre/mixture

Kemal is a tetraploid “Italian Ryegrass type” festulolium derived from crosses between Italian ryegrass and Meadow fescue. It looks and behaves similar to an Italian ryegrass, but with better persistence.

This unique perennial forage grass combines high yield potential with outstanding nutritional value to provide an excellent pasture for sheep, dairy or beef production.

Combining good resistance to rust and other diseases with excellent germination and seedling vigor and fast recovery after cutting or grazing. Kemal is ideal in mixed pastures containing white clover or subclover.
